DETAILED ACTION

Election/Restrictions

1. Restriction to one of the following inventions is required under 35 U.S.C. 121:
 - I. Claims 1-13, are drawn to a method of determining a velocity independent characteristic parameter of an analyte, classified in class 435, subclass 6.
 - II. Claims 14-18, are drawn to an apparatus, classified in class 422, subclass 82.01.

2. The inventions are distinct, each from the other because of the following reasons:

Inventions I and II are related as process and apparatus for its practice. The inventions are distinct if it can be shown that either: (1) the process as claimed can be practiced by another materially different apparatus or by hand, or (2) the apparatus as claimed can be used to practice another and materially different process. (MPEP § 806.05(e)). In this case group I is drawn to a method for determining a velocity independent characteristic of an analyte, while group II is drawn to an apparatus. The apparatus of group II is not limited to the method of group I because it includes detection zones and a detector. Further the apparatus has use in other methods such as cell sorting and determining the number of nucleotides in oligonucleotides. Applicant on page 4 lines 25-30 of the disclosure supports this. Accordingly restriction is proper because the inventions are separate and distinct.

3. Because these inventions are distinct for the reasons given above and have acquired a separate status in the art because of their recognized divergent subject matter as shown by their different classification. Further, the search required for Groups I, II, and III are not totally coextensive, therefore restriction for examination purposes as indicated is proper.

Please note that the classifications in the restriction are illustrative only and **do not** represent all the classes and subclasses which must be searched for each invention; nor is the search limited to issued US patents, but rather includes foreign patents and applications as well as literature searches.

4. A telephone call was made to Don D. Cha (40,945) on 26 September 2003 to request an oral election to the above restriction requirement, but did not result in an election being made.

Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement is traversed (37 CFR 1.143).

5. Applicant is reminded that upon cancellation of claims to a non-elected invention, the inventorship must be amended in compliance with 37 CFR 1.48(b) if one or more of the currently named inventors is no longer an inventor of at least one claim remaining in the application. Any amendment of inventorship must be accompanied by a petition under 37 CFR 1.48(b) and by the fee required under 37 CFR 1.17(I).
